PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with 1+ year of experience building scalable web applications and RESTful APIs using Laravel and MERN stack. Proficient in AI-assisted development workflows, leveraging tools like GitHub Copilot, Claude, and ChatGPT to accelerate delivery and code quality. Skilled in designing relational and NoSQL databases, React.js frontends, and integrating LLM-powered features into production applications.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Virtual University of Pakistan | 2022 – 2026

TECHNICAL SKILLS

Languages	PHP JavaScript Python
Frameworks	Laravel React.js Node.js Express.js Django
Databases	MySQL MongoDB
AI Tools	GitHub Copilot Claude (Anthropic) ChatGPT Cursor IDE Prompt Engineering
AI Integration	OpenAI API Anthropic API LLM API Integration AI-assisted code review
Tools	Git GitHub Postman VS Code Cursor
Concepts	REST APIs MVC OOP Agile AI-augmented development

PROFESSIONAL EXPERIENCE

Backend Developer (Laravel) | Business Innovation & Tech Solutions Islamabad | DEC 2025 – MAR 2026

- Developed and maintained RESTful APIs for a Complaint Management System for Anchorage Islamabad society
- Used AI coding assistants (GitHub Copilot / ChatGPT) to accelerate boilerplate generation and debug complex Eloquent queries
- Implemented role-based access control for Admin, Residents, and Employees
- Designed and optimized relational database schema using MySQL
- Validated APIs using Postman in an Agile development environment

Full Stack Developer | Bitknox Global | JUL – NOV 2025

- Built full-stack features using Laravel (backend) and React.js (frontend)
- Leveraged AI tools to generate boilerplate code and improve development speed by ~40%
- Developed HR Management module with complete CRUD functionality
- Collaborated with UI/UX designers to implement responsive and user-friendly interfaces
- Designed MySQL database structure and improved backend logic efficiency

React.js Developer | Alkhidmat Foundation | FEB – JUN 2025

- Developed dynamic and reusable UI components using React.js
- Integrated REST APIs for real-time data rendering
- Used AI tools to generate component scaffolding and optimize API integration code
- Built and deployed personal portfolio website; implemented contact form integrated with Google Sheets

PROJECTS

Automated Content Submission Evaluation System (FYP – MERN Stack)

- Full-stack platform using MongoDB, Express.js, React.js, and Node.js for CS competition evaluation
- Integrated AI-assisted scoring logic for automated video submission evaluation and real-time feedback
- Built system for automated video submission and evaluation for CS competitions
- Implemented evaluator scoring, real-time feedback, and result management system
- Achieved A+ grade for project performance and innovation

Anchorage Islamabad Admin App & Society Web Portal (Laravel)

- Developed RESTful APIs for admin and resident management with complaint and employee tracking modules
- Used AI tools to accelerate schema design and optimize Laravel codebase performance
- Built modules for complaints, employee assignment, and status tracking
- Optimized existing Laravel codebase to improve system performance
- Designed and maintained MySQL database

HR Management System (Laravel + React)

- Developed backend REST APIs for employee management and integrated React frontend with Laravel backend
- HR can approve employee leave, mark attendance and maintain company statistics on dashboard.
- HR can add, remove an employee and perform CRUD operations on any employee's data.

AI-Augmented Python Projects (20+ Projects)

- Developed mini projects including Mad Libs Game, Quiz Game, Banking System, Weather API App, Encryption/Decryption Tool, and Automation Utilities
- Applied OOP, decorators, file handling, exception handling, and advanced function patterns
- Used ChatGPT and Claude to explore prompt-based code generation and iterate on project logic
- Built real-world logic-based applications such as calculators (standard & compound interest), unit converters (weight & temperature), shopping cart system, and countdown timer
- Designed time-based applications like Alarm Clock, Digital Clock, and Stopwatch •
- Utilized advanced function handling with args and *kwargs for flexible and reusable code
- Used @property and static methods to write cleaner, more maintainable code

AI & EMERGING SKILLS

- Prompt Engineering – crafting effective prompts for code generation, debugging, and content tasks
- LLM API Integration – experience integrating OpenAI and Anthropic APIs into web applications
- AI-Assisted Development – daily use of GitHub Copilot, Cursor, Claude, and ChatGPT in development workflow
- Vibe Coding – rapid prototyping and feature development using AI-first workflows
- Exploring: LangChain, RAG pipelines, AI agent workflows, and fine-tuning basics
