Professional Summary

AI Engineer and Full Stack web Developer with hands-on experience in React js, Laravel, Python, FastAPI and AI/ML development. Skilled in building backend applications, developing RESTful APIs, working with relational databases, and implementing RAG based chatbots. Passionate about developing secure, maintainable software solutions and applying AI to solve real-world problems.

Web and AI Projects

My Portfolio Chatbot 08/2026 – 09/2026

RAG + FastAPI + Langchain + React

- Built and deployed a RAG-powered AI assistant (FastAPI, LangChain, FAISS, Gemini API) that answers questions only from a company's own content. An ingestion pipeline chunks and embeds documents (FAQs, policies, product docs) into a vector index, and grounded prompts with source citations keep answers accurate and traceable.
- Engineered it for real-world use: streaming (SSE) replies with live status updates, automatic fallback across multiple LLMs, per-IP rate limiting, input limits to control API cost, and CORS restricted to the client's domain, so the bot stays fast, reliable and safe to expose publicly.
- Delivered it as an embeddable React chat widget on a FastAPI REST backend, deployed on Vercel, so it drops into any company website. The knowledge base is updated by editing documents and re-running the ingestion script, with no model retraining.

Complete SaaS product for HR 07/2025 – 08/2025

Laravel + React + MySQL

- Developed a SaaS-based HR Management System using Laravel, React.js, and MySQL to manage employee records, track attendance, and visualize company statistics through interactive graphs and percentage-based dashboards.
- Implemented Login/Signup feature and Role-Based Access Control (RBAC), enabling HR administrators to perform CRUD operations on employee records while employees accessed the system as registered users.
- Designed and managed MySQL database structures using Laravel migrations and seeders, and developed RESTful APIs to integrate backend business logic with the React.js frontend.

Zara (Blog Writing Chatbot) 06/2026 – 07/2026

Flask, Html, Css, Javascript

- An AI-powered blog writing chatbot using Python, Flask, and the Google Gemini API, enabling users to generate structured, comprehensive blog posts with engaging titles, headings, practical examples, and conclusions.
- Implemented conversational context management, topic extraction, and prompt engineering to deliver writing assistance tailored to Pakistani students, covering blog writing, academic content, grammar, creative writing, and digital marketing.
- Integrated multi-layer AI safety guardrails, including keyword-based filtering, scope restrictions, automatic retries, exponential backoff, and fallback across multiple Gemini models to improve response reliability and prevent harmful or off-topic requests.

Professional Experience

Backend Developer 01/2026 – 04/2026 | Lahore

Business Innovation & Tech Solutions

- Developed and maintained RESTful APIs using Laravel and PHP for the Anchorage Islamabad mobile application, and website CMS (Content Management System) supporting administrative operations and resident-facing services.
- Implemented separate API endpoints for administrators, Heads of Departments (HODs), and registered users, supporting role-specific access to application features and data.
- Built authentication APIs for user registration, login, and signup workflows to support secure access to the application.
- Implemented end-to-end CRUD operations and APIs for managing approximately 5,000 user records, reviewing individual complaints, and accessing billing information.

- Contributed to enhancing the Anchorage Islamabad website and backend functionality, improving access to housing community information and digital services.

Technical Skills

Languages
PHP, Javascript, Python

Frameworks
Laravel, Pytorch, FastApi, Langchain, Flask, React js

Libraries
Numpy, Pandas, Matplotlib, nltk, pytest, uvicorn, pydantic, transformers, huggingface-hub

Tools and APIs
Postman, REST APIs, Github Copilot, Leet Code, Google Colab

Databases
MySql, PostgreSql

Version Control and Deployment
Git, Github, Vercel, Streamlit

AI Engineering
LLM API Integration, RAG base chatbots, NLP, LabelStudio, Hugging Face, Fine Tuning

Education

Bachelor's of Science in Computer Science (BSCS) 2022 – 2026
Virtual University of Pakistan (Graduated)

Certificates

Bano Qabil Program
React js

HCCDA-AI UET
Advance AI Engineering

Bitknox Global
Full Stack Developer
